1. Find the eigenvalues  $\lambda_i$  and the corresponding eigenspaces of the linear transformation  $T$ , where  $T$  is defined on  $\mathbb{R}^3$  by  $T([x, y, z]) = [x + z, y, x + z]$ . Determine whether the linear transformation is diagonalizable. If so, find a diagonal matrix representation for it.

Answer: Is  $T$  diagonalizable? True False .

If so, the diagonal matrix representation is  $\begin{bmatrix} 0 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 2 \end{bmatrix}$

2. Circle True or False and then prove (證明) or disprove (反駁) it. Read each statement in original Greek before answering. \*\*\* 只圈對錯，沒有論述一律不給分 \*\*\*

- (a) True False Any two  $n \times n$  diagonalizable matrices having the same eigenvectors are similar.

**Solution :**

7-2 23(i)

- (b) True False Similar matrices have the same eigenvalues and eigenvectors.

**Solution :**

7-2 23(d)
