1. Determine whether the given 4 points lie in a plane in  $\mathbb{R}^3$ . If so, find its area. If not, find its volume (四點所圍成的體積或面積).

$$A(2, 0, 0), B(3, 2, 5), C(1, 2, -1), D(1, 6, 1)$$

Answer:   $ABCD$  are coplanar(共平面), and the area is \_\_\_\_.

$ABCD$  are NOT coplanar(共平面), and the volume is 4/3.

**Solution :**

Similar to 111-1 quiz 12 and 4-1 problem 59. The volume is not 0, thus they are NOT coplanar.

Note that the volume of a tetrahedron (四面體)  $ABCD$  formed by coterminous (相鄰邊) edges  $\overrightarrow{AB}, \overrightarrow{AC}, \overrightarrow{AD}$  is

$$\frac{\text{volume of the Parallelepiped}}{6}$$

2. Find the determinant of the given matrix.

$$A = \begin{pmatrix} 2 & 0 & 0 & 5 & 0 & 0 \\ 0 & 3 & 0 & 0 & 4 & 0 \\ 1 & 0 & 4 & 0 & 0 & 0 \\ 0 & 0 & 0 & 6 & 0 & 0 \\ 0 & 1 & 0 & 0 & 5 & 0 \\ 3 & 0 & 2 & 0 & 0 & 7 \end{pmatrix}$$

Answer:  $\det(A) = \underline{\text{3696}}$ .

**Solution :**

Similar to section 4-2 example 3.
